

# My space project

By Rhys Colgan

# Jupiter

Jupiter is the fifth planet from the sun and the largest planet in the solar system. It is a gas giant with a mass more than two and a half times that of all the other planets in the solar system combined, but slightly less than one thousandth with mass of the sun. Jupiter is the third brightest planet. Jupiter is named after the Roman god, the king of the gods.

## mars

Mars is the fourth planet from the sun and is the second smallest planet in the solar system, being larger than only mercury. in the english language, mars is named after the roman god of war. there are currently two robots exploring mars right now.

## saturn

Saturn is the sixth planet from the sun and is the second largest in the solar system after jupiter. It is a gas giant with an average radius of about nine and a half times that of earth. It has only one eighth the average density of earth however with its larger volume,saturn is over 95 times more massive.saturns age is 4.503 billion years old
